Dauirbek Sanakuly 200103453
Zhumadil Kenzhebay 200103245

For the second midterm we added new table reviews. CRUD methods for reviews. In reviews we have rating and comment. Add field average rating for products. Then we added filtering items by price and rating. We used query parameters for this. Also we containerized our app and we create docker-compose file for running it with postgres container. Additionally we write swagger documentation for our project.

Recently we read about clean architecture and since this project will be in our portfolio we will try our best to make it better. So for final we will try change our project's architecture and maybe add some features.
